

ACHIEVE

High-Integrity Voluntary Climate Action

In recent years, there has been an increase in voluntary climate commitments from non-state and subnational actors. These commitments are geared towards reducing greenhouse gas emissions and enhancing climate resilience. However, for voluntary climate action to be truly effective, it is crucial to address integrity-related issues.

The EU-funded ACHIEVE project aims to bolster and expand high-integrity voluntary climate action to achieve net zero emissions by mid-century.

ACHIEVE will develop transition pathways to climate neutrality that integrate voluntary climate action by cities, regions, and companies; it will develop novel social science insights for climate action; contribute to better understanding of sustainability co-benefits and trade-offs; and increase transparency and trust in voluntary climate action by strengthening integrity and making scientific results easily accessible for different stakeholder groups.
